

ALLOWANCES

EFFECTIVE FROM THE DECEMBER 2021 DELIVERY MONTH

The London Cocoa futures and Euro Cocoa futures contracts provide the flexibility to trade and deliver in 10 tonne units whilst also allowing delivery in larger units, either 100 tonnes in bags or 1,000 tonnes in bulk.

The quality parameters allow cocoa of any origin to be potentially deliverable with grading allowances including premiums for good quality cocoa and discounts for poorer quality cocoa.

London Cocoa futures allowances will be set according to the tables listed here. The total allowance shall apply to the Exchange Delivery Settlement Price of the delivery month. Allowances for cocoa delivered against the Euro Cocoa futures contract will be calculated by taking the total London Cocoa futures allowance and applying the spot GBP/EUR FX rate as at 16:00 London time on the last trading day.

ORIGINS ALLOWANCE

ORIGIN GROUP 1

All African origins: no discount

ORIGIN GROUP 2

All other origins: -£50 discount

IN LIEU OF GRADING ALLOWANCE

Allowance in Lieu of Grading is calculated from the number of months since the second grading, or any subsequent grading, excluding any unexpired part of the month in which it was graded

NUMBER OF MONTHS	ALLOWANCE
0-6 Months	No Allowance
7-42 Months	-£4 per tonne per calendar month
≥ 43 Months	-£8 per tonne per calendar month

ALL DELIVERY UNITS GRADING ALLOWANCES

>3.25 and ≤3.5	-6.00%
Above 3.5	Non-Tenderable

WEIGHT ALLOWANCES APPLICABLE TO ALL DELIVERY UNITS

TIME PASSED SINCE ORIGINAL WEIGHT DATE	FULLY ACCRUED % ALLOWANCE (PER TONNES NET WEIGHT)
0-183 days	Accrues daily up to 0.5%
184-548 days	Accrues daily up an additional 0.5% (for an aggregate total of 1%)
549-913 days	Accrues daily up to an additional 0.25% (for a maximum aggregate of 1.25%)

Appendix 1 - STANDARD DEVIATION OF THE BEAN COUNT TEST

The standard deviation of the bean count test (homogeneity) is designed to assess the uniformity of bean size within a delivery unit. The formula used is based on a standard deviation calculation whereby the average number of beans per 100g for the whole delivery unit is measured and then compared against the overall variability of bean sizes within the delivery unit. Excessive variability will result in the award of allowances or, above the maximum permitted value, in the delivery unit being graded as not tenderable.

Formula for the standard deviation of the bean count test:

$$\sqrt{(P(Z - A)^2 + Q(Z - B)^2 + R(Z - C)^2 + S(Z - D)^2)}$$

Where:

- A = Bean count/100g in 13mm round-holed sieve
- B = Bean count/100g in 11.5mm round-holed sieve
- C = Bean count/100g in 10.5mm round-holed sieve
- D = Bean count/100g in base
- P = % bean-weight to total weight in 13mm round-holed sieve
- Q = % bean-weight to total weight in 11.5mm round-holed sieve
- R = % bean-weight to total weight in 10.5mm round-holed sieve
- S = % bean-weight to total weight in base
- Z = Total bean count/100g

The following are needed to calculate the standard deviation of the bean count:

- Number of beans per sieve and base; and
- Weight of beans per sieve and base

From this data the following may be derived:

BEAN COUNT/100G PER SIEVE OR BASE

$$(A, B, C, \text{ or } D \text{ above}) = \frac{\text{Number of beans in sieve} \times 100}{\text{Weight of beans in sieve}}$$

PERCENTAGE WEIGHT PER SIEVE

$$(P, Q, R \text{ or } S \text{ above}) = \frac{\text{Weight of beans in sieve} \times 100}{\text{Weight of beans in sieve}}$$

TOTAL BEAN COUNT PER 100G

$$(Z \text{ above}) = \frac{\text{Total number of beans in each sieve and base} \times 100}{\text{Total weight of beans in each sieve and base}}$$

PLEASE SEE BELOW FOR WORKED EXAMPLE:

SAMPLE	13MM SIEVE		11.5 MM SIEVE		10.5 MM SIEVE		BASE		TOTAL
