TRANSFORMING TRADING AROUND THE GLOBE

IntercontinentalExchange (ICE) operates global commodity marketplaces, including the world's leading electronic energy marketplace and soft commodity exchange. ICE offers a complete range of front-to-back-office trading and risk management services powered by an integrated technology platform. Our leading-edge, global network brings market participants together with benchmark commodities, clearing services and market data in one vibrant marketplace.

A global marketplace: ICE

Futures Markets

ICE operates three regulated derivatives exchanges: ICE Futures U.S., ICE Futures Europe and Winnipeg Commodity Exchange (WCE). Futures and options contracts on agricultural and soft commodities, energy, equity indexes and currency products are available around the clock.

Over-the-Counter (OTC) Markets

ICE is an innovator in the OTC energy markets, bringing electronic trading and cleared products to increase transparency, liquidity and access to these previously opaque and illiquid markets. As a leader in the rapidly growing OTC market, ICE's technology supports both cleared and bilateral markets for hundreds of natural gas, power, refined oil products and natural gas liquids.

Market Data

ICE delivers a range of market information including historical prices, indexes, real-time prices, tick-data and forward curves. And, our leading-edge data feed is just one example of how we use technology to enhance the trading experience for our customers.

Clearing Services

ICE Clear U.S., Winnipeg Clearing Corporation and, soon, ICE Clear Europe provide trade registration and settlement services to our market participants to ensure the integrity of ICE's dynamic markets through effective risk mitigation, financial safeguards and the application of efficient post-trade processes.

ICE backs up its vast global markets and technology network with personal service and a helpdesk that is staffed around the clock. Together with the commitment of our global staff, ICE technology is designed to bring more trading opportunities to customers through the highest level of performance. See why thousands of customers — traders, brokers, risk managers, portfolio managers, commercial firms, and financial institutions — rely on ICE every trading day.

TECHNOLOGY
ENGINEERED FOR DERIVATIVES TRADING

The ICE trading platform brings the sophistication of high-speed trade matching technology together with the flexibility and functionality required to transact in the futures and OTC markets. With both pre-trade and post-trade functionality, ICE's platform supports a broad array of instruments and strategies ranging from swaps, futures and options, outright and multi-legged spreads, to cleared and bilateral markets.

Innovative technology for the future of trading:

Secure and Scalable

The ICE platform is built on a new, state-of-the-art hardware and network infrastructure rather than legacy systems. With multiple connectivity options, the platform is fully architected, developed, secured and operated by ICE engineers. From risk management tools to trade execution and spreadsheet driven programs, ICE's platform is built to support the demands of a 24/7 market.

Fast and Efficient

One of the fastest derivatives trading systems in the world, the ICE platform completes most transactions in an average of 12 milliseconds. With its modern architecture, standard FIX connectivity, lightweight and fast iMPact price feed, the trading engine and related messaging components can broadcast vast amounts of data while conserving bandwidth and offering greater speed.

Flexible and Accessible

Participants can connect to ICE via the Internet through direct-line connections, telecommunications hubs in the U.S., Europe and Asia, or through co-location at ICE's data center. ICE markets are also available via Independent Software Vendors (ISVs), third-party connectivity and an open API for futures. ICE also supports its own front-end trading screen, known as WebICE. WebICE is easy to use, functionally rich and offers built-in pre-trade risk management, a real-time order book and deal ticker, and the industry's most sophisticated spread implication engine.

Collaborative and Responsive

We continually engage with customers to learn about their evolving trading and technology requirements to enhance the platform. This has resulted in one of the most sophisticated and flexible platforms for commodities trading today. ICE also offers complete technology support services through its helpdesks in the U.S. and the U.K.

GLOBAL FUTURES MARKETS AT YOUR FINGERTIPS

When it comes to growth and innovation, ICE is setting a global standard. With futures exchanges based in the U.S., Europe and Canada, ICE delivers a diverse range of products and markets through a single point of access. We offer regulated markets for many of the world's most vital commodity contracts — energy, soft and agricultural commodities, Russell Indexes and currencies — to enable market participants to manage risk in a connected and dynamic world.

Futures & Options Markets

ICE Futures U.S. products:

- Sugar No.11

OTC MARKETS: ENERGY TRADING REFINED

ICE revolutionized OTC markets by bringing electronic trading and clearing to commercial and financial firms worldwide. ICE OTC markets feature a wide range of derivative and physical commodity contracts. From North American natural gas and power contracts covering more than 100 hubs to jet fuel delivered in Asia, if it's a key energy contract, you can find it in ICE's OTC energy marketplace.

Hundreds of products are available in ICE's OTC markets, including:

- > Financial Gas – Fixed for floating, options, basis, index and swing swaps
- > Financial Power – Peak, off-peak, swaps, spreads
- > Oil and Refined Products – Cracks, differentials, outright, spreads
- > Physical Gas – Basis, Canadian and U.S. hubs, fixed-price, index
- > Physical Power – Peak, off-peak, fixed-price, index, spreads
- > Olefins and Aromatics – Ethylene, propylene, benzene, toluene, mixed xylenes
- > Natural Gas Liquids – Physical and financial, fixed for float, fixed-price and index

ICE's OTC markets attract thousands of participants each day, with virtually around-the-clock trading > 23 hours a day, seven days a week.

To make the trading process more efficient and mitigate risk, ICE offers clearing on 100 standardized OTC contracts. Hundreds of additional products are traded bilaterally and matched on ICE using our bilateral counterparty credit filter functionality. Most importantly, ICE's OTC markets support increased transparency, access and liquidity in these vital global markets.

MAXIMUM MARKET INSIGHT

Today's global markets move in milliseconds and they're only getting faster and more dynamic. To ensure customers can monitor market-moving events in real-time and make informed trading decisions, ICE offers a range of market data products, putting information at your fingertips when it's needed.

ICE DATA: INFORMATION FROM THE SOURCE

Indexes

Derived from activity in our global markets, ICE's indexes provide the industry with objective daily prices and indications of liquidity. Get price information for certain North American natural gas and power hubs, Brent Crude, Middle East Sour Crude, Gas Oil, and U.K. Natural Gas and power futures.

Real-Time Data

This subscription-based service gives users access to real-time futures and OTC prices through "view-only" access to our transparent, electronic WebICE platform, including deal ticker and order book.

Historical and End-of-Day Products

Available by subscription, these products include futures and OTC End-of-Day Reports, search capabilities for historical data, and tick data, which encompasses bids, offers and trades.

Forward Curve Products

Each month, many of the world's largest energy market participants submit their month-end forward curve and option prices for price validation of global energy products. Our analysts use this data to develop independent, consensus forward curve and option values for long-dated contracts across a range of commodity contracts.

Consolidated Market Data Feed

The ICE iMPact data feed is a TCP, socket-based protocol that delivers real-time market data messages in a platform-independent, fixed format. No API libraries are required on the client side, and client feed handlers can be written in different languages. ICE iMPact is extremely fast, lightweight and easy to use. It enables algorithmic traders to efficiently process large volumes of data while implementing complex, time-sensitive strategies.

ICE CLEAR: RISK MANAGEMENT AND CLEARING SERVICES

To provide risk management, capital efficiency and maximum financial safeguards to participants in today's demanding markets, ICE Clear is expanding. ICE Clear's state-of-the-art clearing platform supports all aspects of trade registration and contract settlement, while guaranteeing traded contracts registered for clearing. Winnipeg Clearing Corporation clears all WCE contracts.

ICE Clear U.S. is the designated clearinghouse for ICE Futures U.S. and was organized in 1915 as the New York Cotton Exchange Clearing Association. Today, ICE Clear U.S. performs two major functions: (1) reconciliation and clearing of all futures and options transactions made on ICE Futures U.S., and (2) assuring the financial integrity of these transactions. Through its system of financial safeguards and transaction guarantees, ICE Clear U.S. protects the interests of the trading public, the exchange and clearing members.

ICE Clear Europe will build upon the solid clearing infrastructure of ICE Clear U.S. By transmitting trades executed in our global futures and cleared OTC energy markets to an integrated clearing house through ICE technology and post-trade risk management processes, we seek to bring financial benefits to FCMs, while speeding time to market for new products for customers and enabling real-time, straight-through processing for the back office.

Regulatory approval by the U.K.'s Financial Services Authority for ICE Clear Europe is anticipated in early 2008. ICE expects to transition all of its energy futures and OTC derivatives business to its own clearing operations in July 2008, through the transfer of positions to ICE Clear Europe.

COMPREHENSIVE CLEARING SERVICES

Transaction Life Cycle Management

Leading risk management systems and processes

Efficient margin asset management and attractive rates of return on assets deployed

EXPERIENCE THE FUTURE TODAY | **EXPERIENCE ICE**

For direct access to global commodity markets, equity index and currency markets, as well as market data and clearing, there's one name to know: ICE.
